

Ceng 241 Lab Work 11

Polymorphism I: Understanding Polymorphism, using abstract base class

Implement an abstract base class **CengCourses** that have a pure virtual method **print_name()** and derive a **Ceng111**, **Ceng112**, **Ceng241**, **Ceng328**, **Ceng442**, **Ceng331** classes from **CengCourses**. Write appropriate interfaces for each class and write a drive program to test your classes.
