

## Ceng 241 Lab Work 4

**Classes and Data Abstraction III:** this pointer, const (constant) objects and functions

Implement a **Date** class, where the time will be represented with two forms such as 23/10/2004 or 23/September/2004. The public interface consists of methods to

- Create at least two Date object
- Compute the difference between two Dates
- Compute the addition of two Dates
- Make necessary controls such as a day shouldn't be negative
- Compare two dates and find the greatest one
